Career Objective:

DevOps Engineer with 5+ Years of Experience in Cloud Platforms & Automation and Skilled in designing, implementing, and maintaining scalable cloud infrastructures, CI/CD pipelines, and containerized applications. Expertise in AWS, Azure, Terraform, Kubernetes, Jenkins, Docker, and Shell scripting. Proven ability to optimize processes, enhance application performance, and collaborate in agile team environments

Professional summary:

- ✓ AWS DevOps Engineer with 5+ years of experience in **CI/CD pipeline design, cloud infrastructure automation, and Agile/Scrum environments**.
- ✓ Skilled in **Jenkins, Git, GitHub Actions, and Maven** for automated build and deployment workflows.
- ✓ Hands-on expertise in **Docker and Kubernetes** (pods, INGRESS, admin activities) for containerization and orchestration.
- ✓ Proficient in **AWS services**: EC2, S3, VPC, IAM, RDS, ELB, EKS, ECR, CloudFormation, Secrets Manager.
- ✓ Experienced in **Terraform, Ansible, and Shell scripting** for infrastructure provisioning and automation.
- ✓ Strong in **troubleshooting, root cause analysis, and collaboration with Dev & QA teams** to ensure reliable deployments.
- ✓ Knowledgeable in **database management (SQL/NoSQL), SonarQube, Nexus/JFrog, and monitoring tools** like Splunk, Grafana, Dynatrace.
- ✓ Adept at **client interactions, ITIL-based incident/problem management**, and delivering high-quality, scalable software solutions.

Academic Credentials:

- ✓ **Bachelor of Technology** from JNT University, **Kakinada** in 2015.

Professional Experiences:

- ✓ Worked has a AWS DEVOPS Engineer in HCL Technologies from 2020 May to 2024 April
- ✓ Worked has a Cloud & Devops engineer in Airbnb from 2024 to Till Date

Technical Skills:

Configuration Management Tools	Ansible
Continuous Integration Tools	Jenkins
Version Control/Repository	GIT, GITHUB
Operating Systems	Linux, Windows Family
Build Tools	Maven
Cloud Services	AWS (EC2, S3, VPC, IAM, RDS, ELB, EKS, ECR, Cloud Formation, Secrets Manager)
Application Servers	Apache Tomcat
Scripting Languages	Shell Scripting

Containerization	Docker, Kubernetes
Monitoring Tools	Nagios
Bug Tracking Tool	Jira, Service Now
Artifactory Storage	Nexus, JFrog
Static code analysis Tool	Sonar Qube
Database	Postgres, Dynamo DB
Streaming & Messaging	Apache Kafka

Project Details:

Project 1

Project : Airbnb
Role : DevOps Engineer

Roles & Responsibilities:

- ✓ Administered **ECS and Kubernetes clusters**, performing log analysis, health checks, and troubleshooting cluster events to ensure high availability and optimized performance.
- ✓ Designed and implemented **AWS CloudFormation templates** for automated resource provisioning, monitored stack events, and executed rollback procedures during deployment failures.
- ✓ Automated **S3 tarball updates** and managed **IAM policies**, reducing manual effort and ensuring secure, consistent cloud operations.
- ✓ Developed **end-to-end CI/CD pipelines** using **Jenkins and GitHub Actions**, integrated with **JFrog Artifactory** and **Maven**, streamlining build, test, and deployment processes.
- ✓ Built and maintained **custom Docker images** and deployed microservices using **Helm charts**, assigning CPU/memory limits for efficient resource utilization.
- ✓ Configured **Jenkins static and dynamic agents**, automated jobs, and integrated **Kafka** for real-time deployment monitoring and event streaming.
- ✓ Monitored cluster health and application performance using **Prometheus, Grafana, Argo CD, and Kubernetes-native tools**, ensuring seamless integration and functionality across environments.
- ✓ Collaborated with **development and QA teams** in Agile/Scrum environments, actively participated in client interactions, deployment planning, and daily troubleshooting activities.
- ✓ Managed **non-EKS environments**, internal/external load balancers, and supported monthly maintenance window deployments to maintain system uptime and reliability.
- ✓ Developed **SOPs and troubleshooting guides**, conducted smoke testing, and applied patching activities, ensuring compliance with **ISO audits, Qualys, CISCAT, and Docker image security scans**.
- ✓ Created and maintained a **Cloud Maturity Artifact Tracking Wiki**, promoting continuous improvement and updates in cloud DevOps practices.
- ✓

Project 2

Project : XM(INFOR)
Role : AWS DevOps Engineer

Roles & Responsibilities:

- ✓ Configured and managed **S3 buckets** with **IAM policies** for secure storage and backup, utilizing **Glacier** for cost-efficient archiving.

- ✓ Administered **AWS infrastructure** including EC2, S3, VPC, IAM, RDS, ELB, EKS, ECR, CloudFormation, and Secrets Manager to ensure high availability, scalability, and security.
- ✓ Designed and deployed **Terraform scripts and CloudFormation templates** for automated, repeatable infrastructure provisioning.
- ✓ Configured and managed **S3 buckets, IAM policies, and Glacier** for secure storage and cost-efficient archiving.
- ✓ Monitored and optimized **EC2 instances** and other AWS resources, including snapshots, volumes, and auto-scaling, for performance and reliability.
- ✓ Deployed and managed **Kubernetes clusters** and **Docker containers**, including Helm charts, INGRESS rules, and resource allocation for microservices.
- ✓ Implemented **CI/CD pipelines** using Jenkins and GitHub Actions, integrated with **Git/GitLab** and Maven for build and deployment automation.
- ✓ Automated infrastructure and application configurations using **Ansible**, reducing manual effort and ensuring consistent deployments.
- ✓ Developed and maintained **MongoDB and RDS databases**, ensuring high performance, fault tolerance, and availability.
- ✓ Configured **CloudWatch, Prometheus, Grafana, and Argo CD** for proactive monitoring, observability, and troubleshooting of applications and clusters.
- ✓ Conducted **root cause analysis, log investigation, and issue resolution**, improving system reliability and reducing downtime.
- ✓ Collaborated with **development and QA teams in Agile/Scrum environments**, participated in planning, deployments, and client interactions.
- ✓ Implemented **VPC networking security** including ACLs, subnets, NAT gateways, and VPC Peering to secure cross-environment communication.
- ✓ Developed **SOPs and Cloud Maturity documentation**, supporting continuous improvement and operational excellence.
- ✓ Managed **Jenkins static/dynamic agents, persistent volumes, and job scheduling**, ensuring efficient CI/CD pipeline execution.
- ✓ Supported **ISO audits, Docker image security scans, patching activities**, and monthly maintenance windows to maintain compliance and uptime.
